

How to sign your child up with Showbie to access the work your teachers would like you to complete.

Use either the app or webpage - <https://www.showbie.com/>

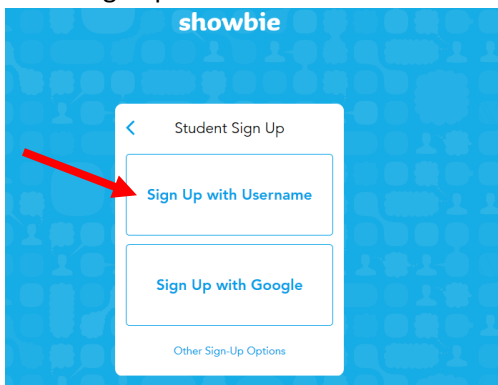

1) Select sign up for free

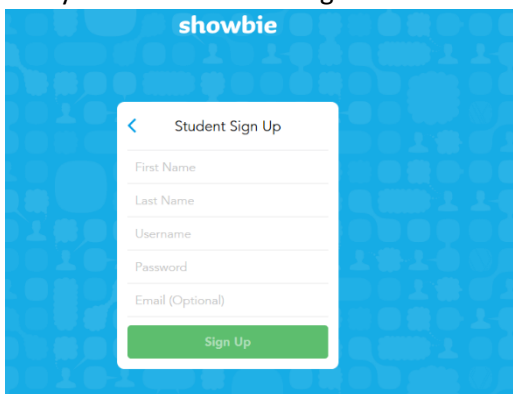

2) Select I'm a Student, once signed up you can just click on 'sign in' each time.

3) Select 'sign up with username'

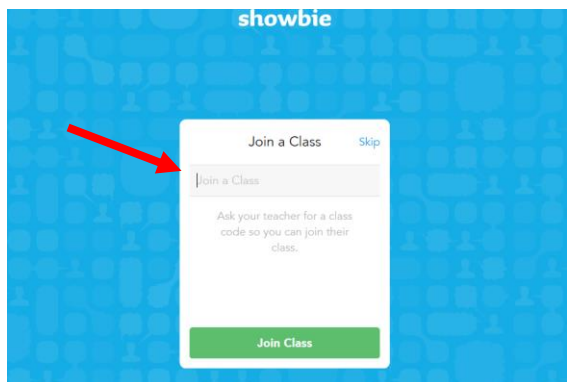

4) Add your child's details to get them an account

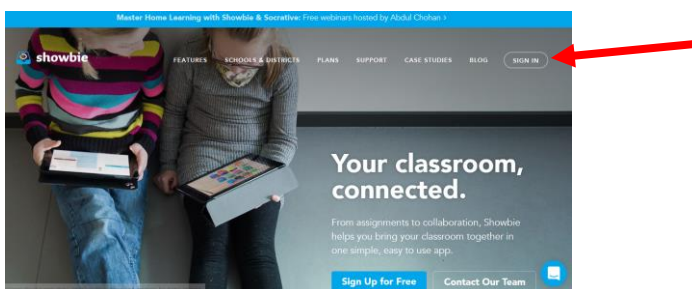

For the username use: first name initial of surname number of your year group – all lowercase
e.g. first name (freddie) initial of surname (r for Roberts)
number of your year group (2 for Year 2) =
Username (example) - **freddier2**
Password (all upper case) – **ABCD**

If a message says this username has been taken already then add a zero after the year group number.

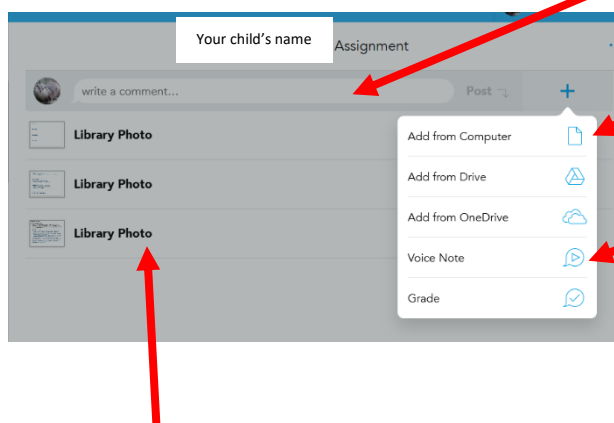

- 5) Click the green sign up and then it will ask you to 'join class'. **Add the Class Code** that has been sent you by Parentmail. Click join class and then you will see the name of your Class where you can click to see the work added by your teacher.

Then you are all set up so next time you just go to sign in on the first page and it will ask for your username and password (that you just created).

I hope this makes it easy for you to access work and send comments to your teachers (within an assignment above the work added will be a box that says write comment). In the comment box you can type messages to your teachers or if you click the blue add sign you can attach photos of your work.

These are the options when on a computer so you can click on add from computer and add the saved photos of your work OR if on the app the options will say 'Camera' and 'Photo Library' to upload the photos.

Voice Note – Record yourself saying a message to leave for your teacher. Click voice note then the red circle to start recording, pause to stop then play to listen back and if happy click 'Post' to send.

Work from teacher – this could be Power Points or pdf's so it won't always say Library photo.

Important:

When opening the home learning schedule, if there are links that you need to click on (especially if you are on a mobile gadget like an iPad), you will need to click on the 3 dots beside the document and select download as a pdf. The links should then work.
